EXECUTIVE PROFILE

Engineering-led technology executive, 27 years, accountable for enterprise technology direction — architecture, standards, org capability and P&L. I turn GenAI and automation from pilots into **operating capability**: control-plane architecture, evidence-backed execution, runtime governance, and unit economics that survive a CFO and an auditor in the same room.

I set the strategy **and** ship the architecture: in six months, **2,400+ commits across 26 platform repositories** — an eleven-platform automation and AI estate in Python, TypeScript and Rust, each held to $\geq 90\%$ coverage, strict typing and immutable audit trails. Equally at home defining a multi-year technology agenda for a board and reviewing the pull request that implements it.

SIGNATURE IMPACT

- **Built an eleven-platform automation and AI estate** — orchestration, AIOps, agentic operations, packaging, voice, infrastructure and AI-gateway fabrics — now the delivery backbone of a global Managed Services practice.
- **\$50M multi-year Azure/AWS transformation** for European-regulated payment and financial-risk platforms; 99.9%+ uptime on clearing and settlement.
- **18–25% YoY run-rate reduction** via enterprise FinOps/TBM, with CFO-grade cost transparency across cloud, infrastructure and platform services.
- **99.95%+ reliability** across mission-critical BFSI estates; AIOps predictive detection and closed-loop remediation materially cut Sev-1 volume.
- **Founded an engineering Center of Excellence** — standards enforced in every engineer's IDE, an AI/automation academy, and an ADR-governed charter making quality structural rather than aspirational.
- **Led and scaled 300+ engineers** across cloud, SRE, security, network and platform ops — CXO-facing owner for regulatory audits, SLA governance and resilience.

CORE EXPERTISE

AI & Agentic Systems — Agentic architecture · multi-agent orchestration · LLMops (versioning, staged rollout, rollback, inference failover) · RAG and knowledge engineering · LLM evaluation harnesses · CPU-native small models · MCP tool protocols

AI Governance & Responsible AI — EU AI Act · ISO/IEC 42001 · NIST AI RMF · graduated-autonomy ladders · human-in-the-loop gates · guardrails · data-boundary enforcement · immutable audit evidence · AI FinOps and unit economics

Architecture & Engineering — Event-driven control planes · schema-first contracts · distributed systems · Python · TypeScript/React · Rust · .NET · FastAPI · Airflow · Kubernetes/OpenShift · PostgreSQL/pgvector · Terraform · Azure and AWS · zero-trust security

Operations & Delivery — AIOps and SRE · ITIL incident/problem/change/release · ServiceNow and ITSM automation · hyperautomation · FinOps/TBM · P&L and portfolio ownership · global delivery at scale

EXPERIENCE

Hitachi Digital Services

Jan 2026 – Present

Sr. Director, Intelligent Automation, AI & Innovation — Managed Services · Hyderabad

- Own the automation and AI charter end to end — strategy, architecture, engineering and governance — for a global Managed Services practice.
- Built the platform estate as reusable fabrics rather than per-client bespoke work: **RunFabric** (event-driven execution control plane — 62 system adapters, 100 workflows, 25 operators), **DWFabric** (application packaging and lifecycle factory — 28 AI agents, 145 business engines, CAB governance, deployment rings), **OpsFabric** (operations intelligence, RAG, autonomous ops), **AIOpsFabric** (seven-plane signal-to-incident platform with a provable autonomy ladder).
- Extended it across adjacent surfaces: **VoiceFabric** (multilingual voice service desk, $P50 \leq 800$ ms mouth-to-ear), **InfraFabric** (infrastructure lifecycle intelligence), **RouteFabric** (self-hosted policy-governed AI gateway in Rust — protocol translation, circuit breaking, budget enforcement in the hot path), **FabriCat** (extensibility SDK — 1,024 tests, 97.9% coverage).
- Set a non-negotiable engineering bar estate-wide — $\geq 90\%$ coverage and mutation score, strict typing, zero-bypass commit gates, ADR-governed design, `correlation_id` traceability end to end — and made it self-enforcing through **DevEngine**, a development Center of Excellence toolchain, plus an internal academy that builds the AI and automation bench.

- Made runtime governance a product capability, not a policy document — confidence thresholds, human-in-the-loop approval, staged rollout with rollback, evidence that refuses to ship once its proof goes stale — every investment measured on throughput, cost avoidance, risk and adoption.

BuildWorks.AI

Feb 2025 – Present

Founder & Chief of AI · Hyderabad

- Lead design and delivery of an enterprise GenAI platform with runtime governance, licensing enforcement, tenant isolation and end-to-end observability.
- Operationalized LLMOps — model onboarding and versioning, staged rollout and rollback, inference failover, cost telemetry for financial governance.
- Enforce Responsible AI in production — prompt filtering, role-based model access, data-boundary enforcement, full audit trails; engineering lead for open-source governance assets (Apache 2.0) covering secure inference routing and compliance logging.

Wipro Limited

May 2021 – Jan 2025

Delivery Head · Detroit Metropolitan Area

- Directed multi-million-dollar cloud and platform modernization portfolios for large BFSI and regulated enterprises across North America.
- Owned platform reliability at **99.95%+ sustained uptime** for banking, payments and financial-risk workloads; built AIOps operations — predictive detection, event correlation, proactive remediation — materially cutting Sev-1 incidents and unplanned outages.
- Led enterprise FinOps and TBM programs delivering **18–25% YoY run-rate cost reduction** with CFO-grade transparency.
- Established ITIL-aligned incident, problem, change and release governance across global delivery; scaled an organization of **300+ engineers**.

R C Agri Farms

Aug 2019 – Apr 2021

Founder & CTO · India

- Built an IoT and AI monitoring platform for smart farming on Azure with Kubernetes (K3s) — **10× user growth** at **15% lower cost** on an open-source stack.

Societe Generale Global Solution Centre

Aug 2015 – Jul 2019

Head of Cloud Infrastructure · Bangalore

- Led a **\$50M** multi-year Azure and AWS transformation for core payment and financial-risk platforms under strict European banking regulation, delivering **99.9%+ uptime** for high-volume transaction processing, clearing and settlement.
- Modernized the legacy estate through large-scale OpenStack and Docker adoption — **20% infrastructure cost reduction** with faster, more resilient deployment.
- Directed a **175+ engineer** organization across cloud, virtualization, network, security and operations; regulatory-facing owner for audit readiness and risk remediation.
- As Deputy Head of Infrastructure (2015–2017): **30% operational efficiency gain, 20% downtime reduction**.

EARLIER CAREER

Wipro	Delivery Manager — +15% customer satisfaction, +30% wins	2014 – 2015
Wells Fargo	Technology Manager — 99.9% uptime; 20% OPEX reduction	2013 – 2014
IBM	Sr. Technical Services Manager — 20% service improvement	2009 – 2013
Hewlett-Packard	Technical Solution Consultant — +25% availability	2006 – 2009
Global Open Source Solutions	Sr. IT Engineer, Abu Dhabi — +20% division revenue	2005 – 2006
CMC Limited	IT Engineer — embedded sensor integration, IoT edge analytics	2001 – 2005
Navayuva Enterprises	Engineer — datacenter networking and proxy optimization	1998 – 2001

EDUCATION

IIM Ahmedabad	Business Administration & Management	2017
India School of Business Mgmt & Admin	MBA — Information Technology & Project Management	2007 – 2009
State Board of Technical Education, AP	Diploma — Computer Engineering	1995 – 1998

CERTIFICATIONS Red Hat Certified Engineer (RHCE) · Large Language Models · Generative AI Studio

AWARDS Award of Excellence · SDQE Service Delivery Quality Excellence · Best Defect Prevention · Team of the Quarter

LANGUAGES English · Hindi · Telugu · Kannada
